

HUSUM WIND BESS Area – Storing energy. Powering the future.

Storage is becoming key to the energy transition

As renewable energy continues to expand, the importance of high-performance energy storage is growing. To achieve the target of 80% renewable electricity by 2030, wind energy and battery storage in particular will need to work even more closely together. In the field of **BESS (Battery Energy Storage Systems)**, the storage capacity of large-scale battery systems is expected to increase tenfold to around 60 GWh by 2030.

The years 2027 and 2028 will be crucial: this is when it will become clear whether new regulatory frameworks can enable the necessary scale-up of energy storage. HUSUM WIND 2027 therefore comes at a time when battery energy storage systems are becoming a central component of the energy system.

Store wind. Make energy available.

As wind energy continues to expand, the importance of high-performance energy storage is growing. Battery energy storage systems ensure that renewable electricity is available when it is needed – making them a key building block for a flexible, stable energy system increasingly powered by renewables.

The BESS Area – creating value for everyone

With the **BESS Area**, HUSUM WIND 2027 is creating a dedicated meeting place for the growing energy storage industry. Battery manufacturers, system integrators, project developers, energy suppliers and grid operators will meet investors, insurers, service providers and other key market players.

Together, the exhibition and Renewable Forum will bring technologies, expertise and real-world applications together – from storage technologies and system integration to grid connection and co-location, as well as energy management, market participation and commercial viability.

The BESS Area is the platform for networking, new partnerships and tangible business opportunities centred around the energy storage solutions driving the energy transition.

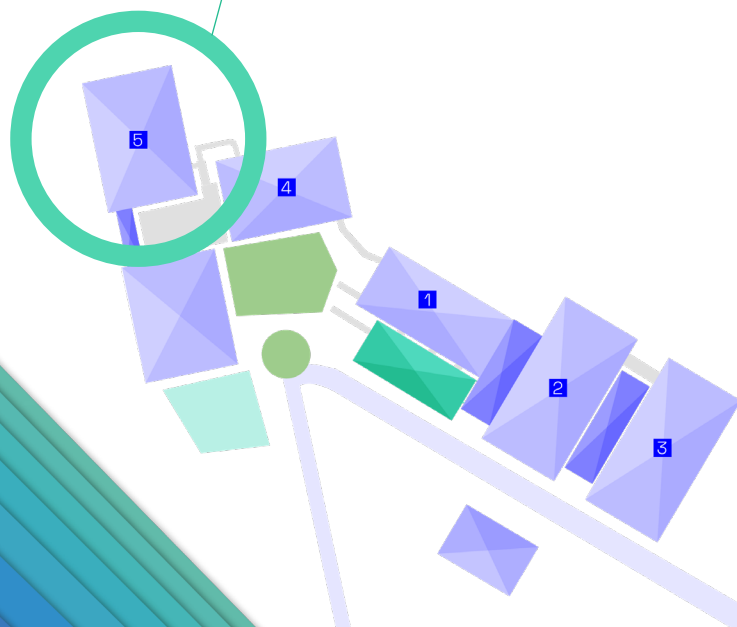

As an exhibitor, you benefit directly from these advantages. Find out more about the different opportunities to showcase your company in the **BESS Area**.

> BESS Area & Forum

Halle 5

Key focus areas

- > Energy storage technologies
- > System integration
- > Grid integration
- > Project development
- > Co-location
- > Energy management
- > Energy trading & financing

HUSUM WIND – a pioneer from the very beginning

Since its beginnings, HUSUM WIND has stood for the continued development of a sustainable energy supply. What began with the pioneers of wind energy is now part of an increasingly complex energy system.

With the **BESS Area**, HUSUM WIND 2027 is therefore creating a dedicated meeting place for battery energy storage and its integration into the energy system. Providers of solutions and services from across the entire BESS value chain will meet a knowledgeable and engaged professional audience.

HUSUM WIND 2027 is the ideal platform to position your battery energy storage solutions.**> Tap into a growing market**

At HUSUM WIND, you can position your company early in one of the energy transition's most dynamic markets of the future and tap into its significant growth potential.

> Meet decision-makers

Build valuable connections with project developers, energy suppliers, grid operators, investors and other key market players.

> Bringing wind & energy storage together

Showcase your BESS solutions where wind energy, energy storage and the requirements of the future energy system come together – at HUSUM WIND.

Ausstellen. Mitgestalten. Profitieren.

Become an exhibitor in the **BESS Area** and provide the answers to the pressing questions of the energy transition:

How can we reliably integrate renewable electricity into the grid – and make it available when it is needed?

Showcase your company's technologies and solutions where the industry comes together to shape the energy system of tomorrow.

The **BESS Area** is more than just an exhibition space: together with the Renewable Forum, it combines innovative solutions with expertise, knowledge transfer and professional exchange – creating opportunities for new connections, tangible business opportunities and strong partnerships for the next phase of the energy transition.

HUSUM WIND
14. – 17. Sept 2027
